Section 1: Overview

The Zurich Sewage Treatment Plant (STP) is a Class 1 Wastewater Treatment facility and the collection system is a Class 1.

The Zurich STP operates under Environmental Compliance Approval (ECA) # 4039-877J9R issued July 21, 2010. The works has the following components:

Main Lift Station

- 2 submersible sewage pumps in the wet well;
- 1 standby diesel generator with a capacity of 70 kW.

Waste Stabilization Pond

- Four cells;
- Aeration equipment in Cell 1 and Cell 2 air supplied by three positive displacement blowers capable of providing 168.5 L/s of air;
- one 400 mm diameter pipe to drain facultative lagoon Cell 3 and discharge to the filter pumping station through MH1;
- one 400 mm diameter pipe to drain facultative lagoon Cell 4 and discharge to the filter pumping station through MH1;
- sewage transfer structures from Cell 1 to Cell 2, 3 and 4; from Cell 2 to Cell 3; from Cell 3 to Cell 4 and from Cell 1 to Cell 4.

Effluent Filtration System

- Two intermittent sand filters for alternate dosing, each having a minimum total surface area of 900 m² comprised of approximately 1,060 mm of filter media, including an under drain system comprised of 150 mm diameter perforated collection laterals spaced at 4.5 to 5.0 m and bedded in gravel layer, continuously discharging the final effluent;
- One filter pump station equipped with two submersible pumps (one duty and one standby) each with a rated capacity of 64.4 L/s to the filter at 12.5 m TDH and discharging effluent to filters through separate 200 mm diameter discharge headers;
- One valve and effluent metering chamber; and
- One 450 mm diameter gravity sewer to convey the effluent of the filters to Zurich drain, from where it flows to Lake Huron approximately 10 km downstream of the lagoons.

Phosphorus Removal System

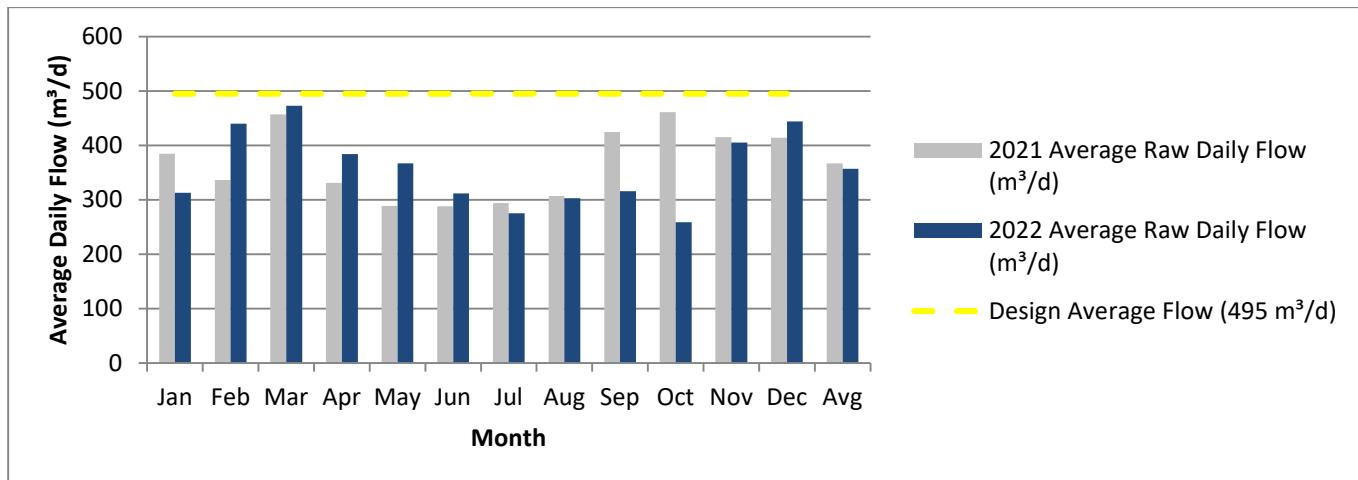

- A phosphorus removal system for the continuous addition of chemicals, consisting of one chemical storage tank and two feed pumps (one duty and one standby) each capable of supplying minimum and maximum alum dosages of 1.35 L/hr. and 36.77 L/hr.

Section 2: Monitoring Results

Raw Sewage Monitoring

The 2022 average daily flow of raw sewage was 357.03 m³/ day. The Zurich STP is at 72.13 % of the rated capacity of 495 m³/ day. The average daily flow is down 2.7% from the 2021 average daily flows, refer to Chart 1.

Chart 1: Zurich Lagoons Average Daily Raw Sewage flows in 2022 compared to 2021 flows.

There were 35 days in total where the average daily flow exceeded the rated capacity of the STP. The facility rated capacity was exceeded in the months February (7 days), March (14 days), May (3 days), September (2 days), November (6 days) and December (3 days) of 2022. Compliance is an annual average; daily exceedances are not a reportable event.

The maximum daily raw sewage flow for 2022 was 1,394.4 m³/day; this is 282 % of the rated capacity. The maximum daily flow of 1,394.4 m³/ day occurred in February 2022; the high flows were related to wet weather conditions. The 2022 maximum daily raw sewage flow of 1,394.4 m³/ day is 54.7 % of the peak daily raw sewage flow rated capacity of 2,549 m³/ day.

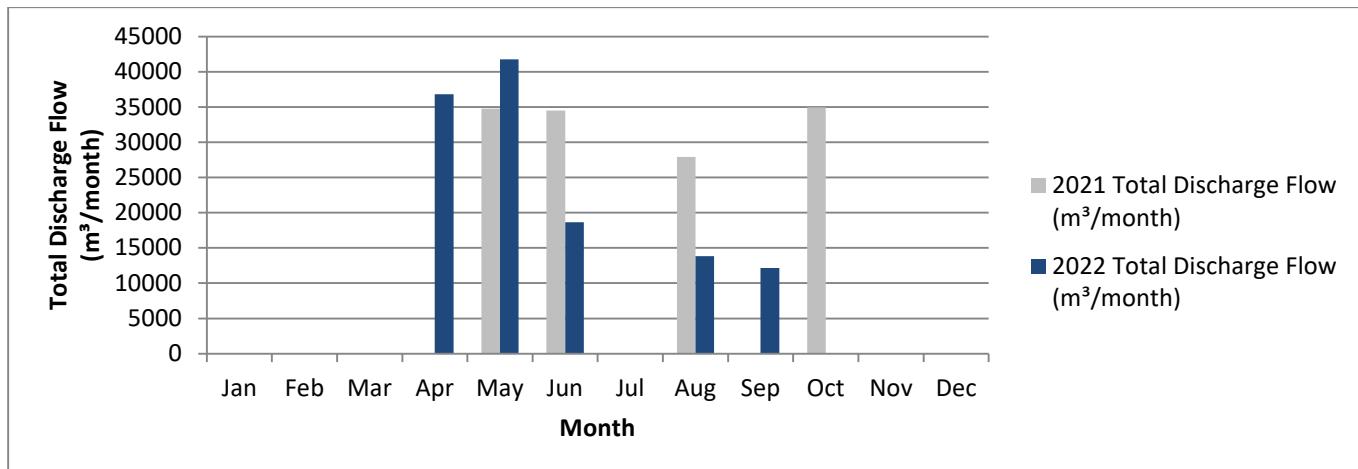

Raw samples are obtained on a monthly basis and tested for BOD5, total suspended solids, total phosphorus and Total Kjeldahl Nitrogen. All samples were obtained as required, refer to Appendix A for monitoring results.

Effluent Monitoring Results

The lagoon was discharged in 2022 during the months of April, May, June, August, and September.

The lagoon was discharged into the Zurich Drain approximately 10 kilometers upstream of Lake Huron. The total volume discharged into the Zurich Drain for the 2022 reporting period was 123,240 m³. The 2022 average daily discharge flow was 1,196.5 m³ with a maximum daily discharge flow of 1,665.8 m³; the maximum daily discharge flow value was recorded in September 2022, see chart 2. The total volume discharged is down 6.8% from 2021 effluent discharged.

Chart 2: Zurich Lagoons Discharge Final Effluent Flows in 2022 compared to 2021 flows.

The effluent is sampled weekly during lagoon discharge. The Zurich Sewage Lagoons provided effective wastewater treatment in 2022; all effluent concentration limits specified by the MECP in Environmental Compliance Approval # 4039-877J9R were met (refer to Table 1).

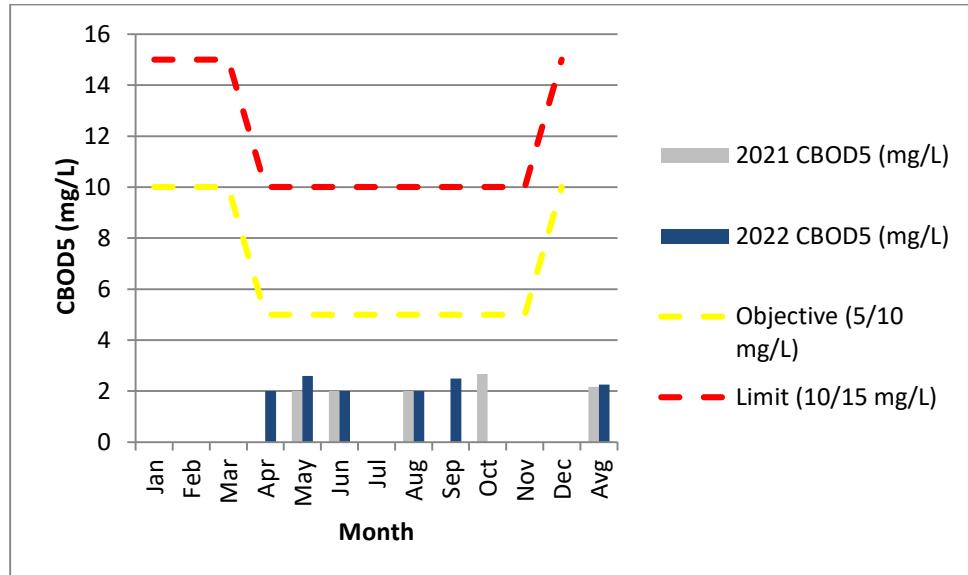

Table 1: Effluent monitoring results compared to the limits specified in the ECA.

| Effluent Parameter | Concentration Limits | 2022 Average Monthly Concentration Ranges | Number of Exceedances |
|-------------------------------|--|---|-----------------------|
| CBOD5 (mg/L) | 10 mg/L (*15mg/L) | 2 - 3 mg/L | 0 |
| Total Suspended Solids (mg/L) | 10 mg/L(*15mg/L) | 2 - 4 mg/L | 0 |
| Total Phosphorus (mg/L) | 0.5 mg/L(*1.0mg/L) | 0.0 - 0.0 mg/L | 0 |
| Total Ammonia (mg/L) | 3.0 mg/L(*5.0mg/L) | 0.1 – 3.0 mg/L | 0 |
| E. Coli (per 100 ml) | 100 cfu/ 100 mL | 1 - 9 cfu/100 mL | 0 |
| pH | maintained between 6.0 – 9.5, inclusive, at all times. | 6.9 - 7.6 | 0 |

*values are for discharge during December 15 – April 15

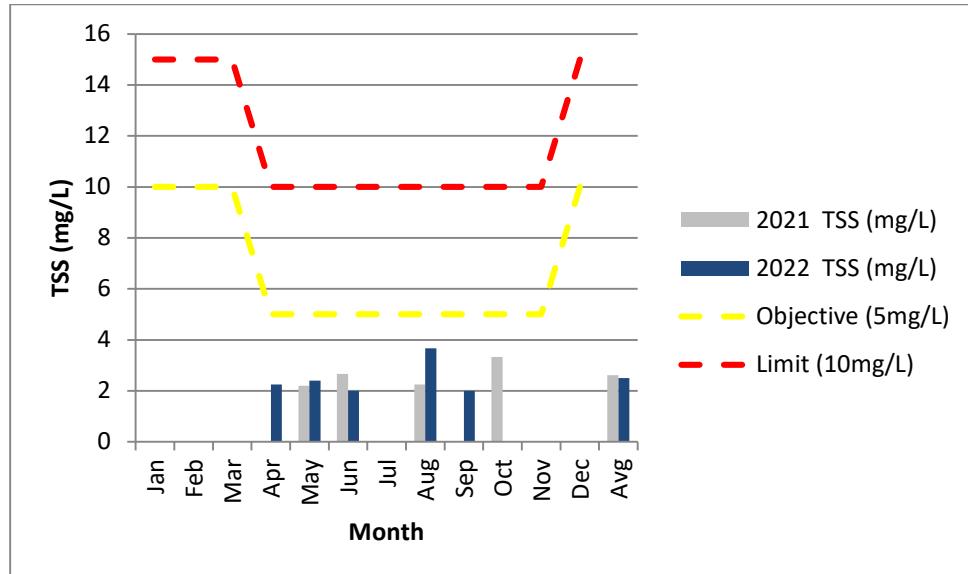

Zurich Lagoons average monthly effluent carbonaceous Biochemical Oxygen Demand (CBOD5) results for 2022 met the ECA identified limit and design objective values, refer to Chart 3.

Chart 3: Effluent CBOD5 Results for 2022 compared with 2021.

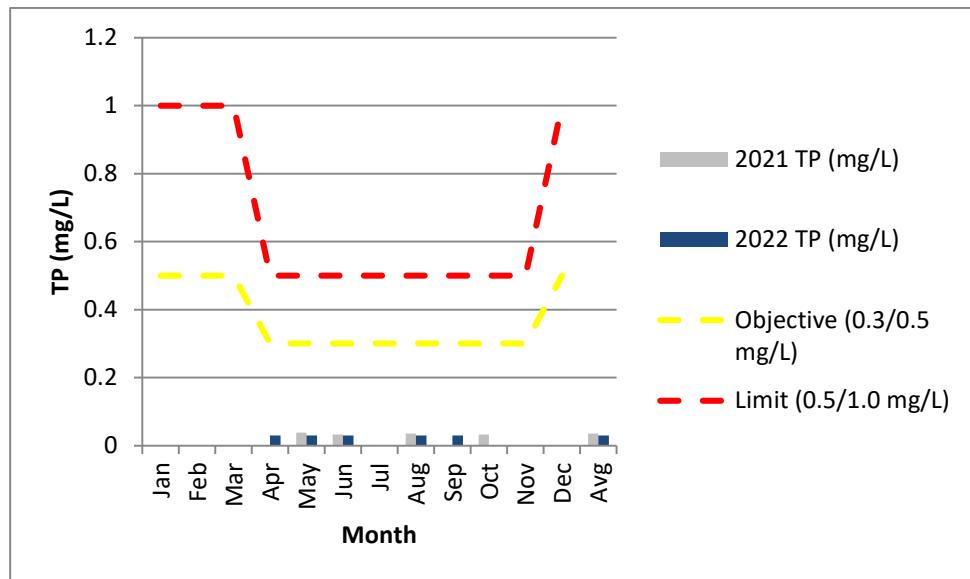

Zurich Lagoons average monthly effluent Total Suspended Solids (TSS) results for 2022 met ECA identified limit and design objective values, refer to Chart 4.

Chart 4. Effluent TSS results for 2022 compared with 2021.

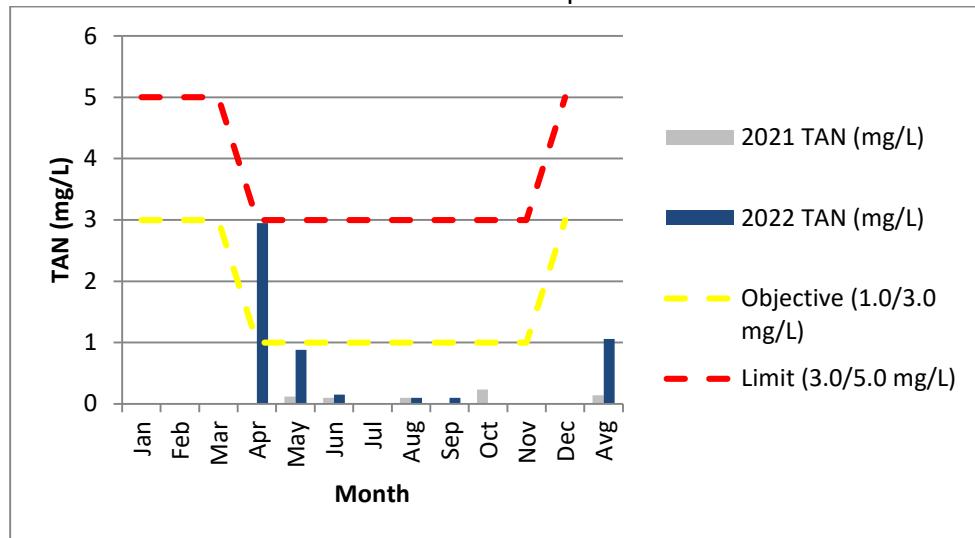

Zurich Lagoons average monthly effluent Total Phosphorus (TP) results for 2022 met ECA identified limit and objective values, refer to Chart 5.

Chart 5. Effluent TP results for 2022 compared to 2021.

Zurich STP average monthly effluent Total Ammonia Nitrogen (TAN) results for 2022 met ECA identified limit; objective value was not met for the month of April (2.05 mg/L) for discharge period December 15-April 15, refer to Chart 6. Refer to Section 7 for discussion on the objective exceedance.

Chart 6. Effluent TAN results for 2022 compared to 2021.

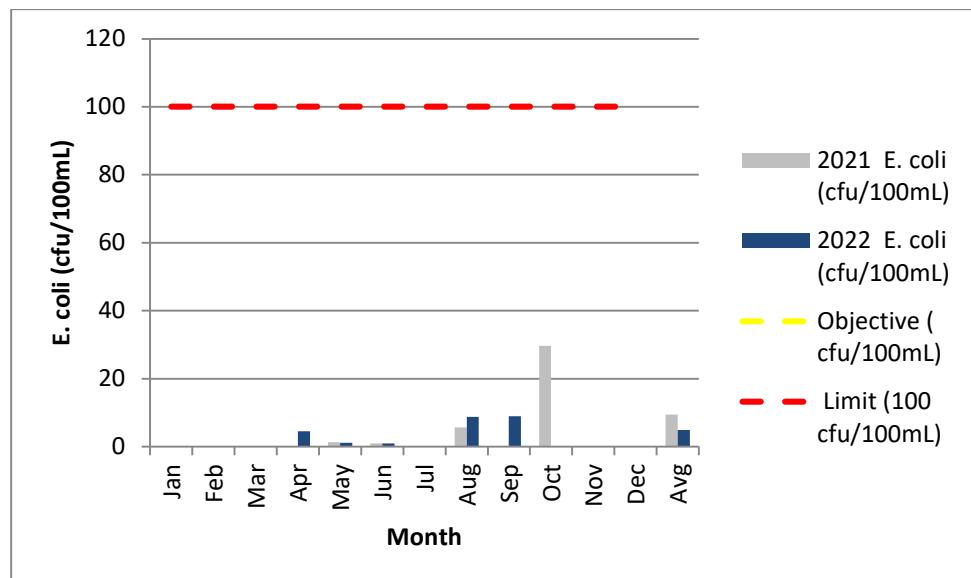

Final effluent pH and temperature (Temp.) were analyzed for each Total Ammonia Nitrogen (TAN) sample collection in order to calculate the unionized ammonia concentration. All results met the Provincial Water Quality Objective of 0.02mg/L, refer to Table 2.

Table 2. Effluent Temperature, TAN, pH and Unionized Ammonia Concentrations.

| Date | Temp. °C | TAN mg/L | pH | Unionized Ammonia mg/L | Meets Ontario Provincial Water Quality Objective 0.02 mg/L |
|------------|-------------|-------------|------|---------------------------|---|
| 2022-04-05 | 6.8 | 3.8 | 7.10 | 0.007 | Yes |
| 2022-04-11 | 10.9 | 3.9 | 7.34 | 0.017 | Yes |
| 2022-04-19 | 7.6 | 2.4 | 7.19 | 0.006 | Yes |
| 2022-04-26 | 12.1 | 1.7 | 6.94 | 0.003 | Yes |
| 2022-05-02 | 12.8 | 1.6 | 7.04 | 0.004 | Yes |
| 2022-05-09 | 14.3 | 1.7 | 7.24 | 0.008 | Yes |
| 2022-05-16 | 18.5 | 0.6 | 7.33 | 0.005 | Yes |
| 2022-05-24 | 16.1 | 0.2 | 7.12 | 0.001 | Yes |
| 2022-05-30 | 23.6 | 0.3 | 7.13 | 0.002 | Yes |
| 2022-06-06 | 20.0 | 0.1 | 7.38 | 0.001 | Yes |
| 2022-06-13 | 22.3 | 0.2 | 7.28 | 0.002 | Yes |
| 2022-08-09 | 23.4 | 0.1 | 7.11 | 0.001 | Yes |
| 2022-08-17 | 24.3 | 0.1 | 7.41 | 0.001 | Yes |
| 2022-08-22 | 24.0 | 0.1 | 7.34 | 0.001 | Yes |
| 2022-09-22 | 19.2 | 0.1 | 6.99 | 0.001 | Yes |
| 2022-09-26 | 15.0 | 0.1 | 7.63 | 0.001 | Yes |

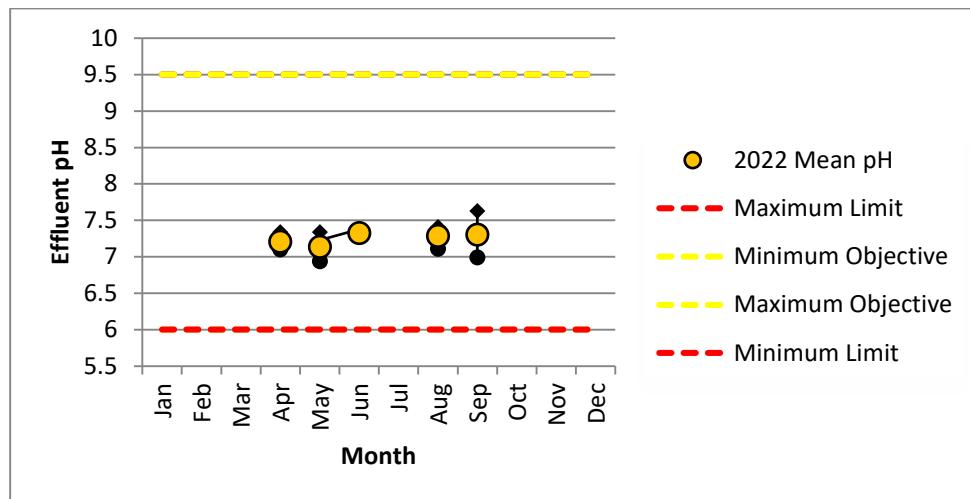

Zurich STP effluent E. coli Geometric Mean Density (GMD) results for 2022 met ECA identified limit and objective value of 100 cfu/100 mL, refer to Chart 7.

Chart 7. Effluent E. coli results for 2022 compared to 2021.

Zurich STP final effluent pH results for 2022. Daily pH results met ECA identified limit and objective values, refer to Chart 8.

Chart 8. Effluent pH Results for 2022.

Refer to Appendix A for the flow and sampling summary.

Section 3: Operating Problems and Corrective Actions

Grease build up in wet wells is managed by hiring a contractor to remove the grease build up from the wet wells and clean check valves on multiple occasions.

Operational staff closely monitored vegetative growth on the effluent sand filter beds; the filter beds were mowed and rototilled on numerous occasions to curtail growth.

Pumps were pulled and cleaned or repaired as needed.

Alum lines were replaced as needed.

Multiple power outages occurred due to weather conditions in the area; the process was effectively managed throughout all power outage events.

There was a forcemain break at the lagoon sewage pumping station on March 13, 2022. The break was discovered by a nearby resident that notified the municipality. OCWA responded to the site and found that raw sewage was spilling onto the ground around the pumping station and was entering the Zurich drain. The responding operator shut off the pumps and called a vacuum truck on site to stop the spill of raw sewage. The Spills Action Centre and Huron Perth Public Health were notified of the issue; samples

were collected and the required repairs completed. It is estimated that 88.8 m³ of raw sewage was spilled during the 18.5hr event.

Section 4: Summary of Maintenance

Regular-scheduled monthly preventative maintenance has been assigned and is monitored using OCWA's Work Management System program (Maximo), refer to Appendix C for a work order summary.

Additional unscheduled maintenance is completed as needed. Additional maintenance completed during 2022 included:

- Installed new air filters on blowers #1, 2, 3
- Flushed alum lines; replaced alum pump tubing;
- Completed filter bed maintenance as needed;
- Replaced lagoon sump pump;
- Repaired sewage force main break;
- Completed sewage line repairs as needed;
- Completed UPS maintenance; repaired and replaced batteries as applicable;
- Pulled, cleaned and repaired pumps as needed;
- Electrician completed MCC panel, Blower and VFD inspections;
- Upgrade facility to fibre optics;

Section 5: Summary of Effluent Quality Assurance

The effluent parameters are analyzed by SGS Lakefield which is an accredited laboratory in Ontario. Annually a facility sampling schedule calendar is prepared and reviewed with operational staff; the sampling schedule calendar identifies sample collection dates to meet regulatory requirements of the Environmental Compliance Approval. The lab results are reviewed by the operators as they are received to ensure compliance.

The system is monitored on an on-going basis to ensure proper operations. System checks include recording well levels, pump hours, testing of alarms and running the generators to ensure all systems are operating effectively.

Section 6: Summary of Calibrations

In 2022 the facility flow meter calibrations were completed by Pierce Services and Solutions Inc, refer to Appendix B for calibration records. Instrumentation for pH monitoring is calibrated by the operator prior to use.

Section 7: Summary of Effluent Objectives

The Zurich STP provided effective wastewater treatment in 2022. Effluent concentration objectives specified by the MECP in Environmental Compliance Approval # 4039-877J9R were met for CBOD, Total Suspended Solids, Total Phosphorus and pH. The Total Ammonia Nitrogen (TAN) objective was not met

in April (2.65mg/L) for the objective period of April 16 to December 14. This was due to spring start up of the system where the filters need seasoning to build up the biological layer to effectively remove TAN from the effluent. Once the filter beds were seasoned the monthly effluent results were below the objectives.

Regular scheduled filter maintenance, alum dosage adjustments, discharging rate adjustments and effluent monitoring are completed by operational staff to strive and meet Environmental Compliance Approval design objectives.

| Effluent Parameter | Concentration Objective | 2022 Average Monthly Concentration Ranges | Number of Exceedances |
|-------------------------------|--|---|-----------------------|
| CBOD5 (mg/L) | 5 mg/L (*10mg/L) | 2 - 3 mg/L | 0 |
| Total Suspended Solids (mg/L) | 5 mg/L(*10mg/L) | 2 – 4 mg/L | 0 |
| Total Phosphorus (mg/L) | 0.3 mg/L(*0.8mg/L) | 0.0 - 0.0 mg/L | 0 |
| Total Ammonia (mg/L) | 1.0 mg/L (*3.0mg/L) | 0.1 – 3.0 mg/L | 1 |
| pH | maintained between 6.0 – 9.5, inclusive at all times | 6.9 - 7.6 | 0 |

*values are for discharge during December 15 – April 15

Section 8: Summary of Complaints

No complaints were received in 2022.

Section 9: Summary of By-pass, Spill or Abnormal Discharge Events

One spill event was identified in 2022, refer to Section 3 for further details. A total of 88.8m³ of raw sewage was spilled when the forcemain broke which was estimated to be for 18.5 hours.

There were no bypass or abnormal discharge events identified in 2022.

Section 10: Other Information the District Manager Required

No applicable information identified in 2022.

Appendix A: Flow and Monitoring Results

Instrument Verification Sheet

Client Name: Ontario Clean Water Agency

Date: April 4, 2022

Equipment Description: Level Sensor

Assigned Number: Wet Well Level

Area Located: Zurich Pumping Station

Inventory Number: 249058

Instrument Data

Manufacturer: Milltronics

Model Number: MultiRanger Plus

Type: Ultrasonic

Serial Number: N/A

Range: 0 - 2.050 m

Accuracy: +/- 5%

Method Of Calibration: Standard Measurement

Application: Waste Water

Calibration Data
